# INDEX TO AUTHORS

A

**Addis, T., Poo, L. J., and Lew, W.** Protein loss from liver during a two day fast, 117

—, —, and —. The quantities of protein lost by the various organs and tissues of the body during a fast, 111

**Almquist, H. J.** Purification of the antihemorrhagic vitamin by distillation, 589

**Anderson, Rubert S.** The attempted use of crystals as calcium electrodes, 323

**Ayres, Gilbert B., and Lee, Milton.** Determination of the nitrogen partition in tissues, 139

B

**Baernstein, Harry D.** A new method for the determination of methionine in proteins, 25

—. The sulfur distribution in proteins. II. The combined methods for the determination of cystine, methionine, and sulfates in hydriodic acid digests, 33

**Bancroft, Frederic W.** See Chargaff, Bancroft, and Stanley-Brown, 149, 155

**Belcher, Donald.** See Sendroy, Shedlovsky, and Belcher, 529

**Berg, Benjamin N.** See Schoenheimer, Rittenberg, Berg, and Rousselot, 635

—. See Scott and Berg, 163

**Berg, Clarence P.** The resolution of *dl*-lysine, 9

**Bergmann, Max, and Niemann, Carl.** On blood fibrin. A contribution to the problem of protein structure, 77

—, **Zervas, Leonidas, and Fruton, Joseph S.** On proteolytic enzymes. XI. The specificity of the enzyme Papain Peptidase I, 593

**Berliner, Frieda.** See Schoenheimer and Berliner, 19

**Biskind, Gerson R.** See Glick and Biskind, 551

**Bodansky, Meyer.** Comparison of glycine and guanidoacetic acid as precursors of creatine, 641

**Bodansky, Oscar.** The effect of $\alpha$-amino acids and magnesium on the activity of kidney and intestinal phosphatases, 101

**Bollman, Jesse L.** See Flock, Bollman, and Mann, 179, 201

**Booher, Lela E.** See Whitcher, Booher, and Sherman, 679

**Boyd, Eldon M.** The extraction of lipids from the red blood cells, 37

**Brewer, George.** See LARSON and BREWER, 279

**Bull, Henry B.** See NEURATH and BULL, 519

C

**Chanutin, Alfred,** and **Ludewig, Stephan.** The blood plasma cholesterol and phospholipid phosphorus in rats following partial hepatectomy and following ligation of the bile duct, 1

—. See LUDEWIG and CHANUTIN, 327

**Chargaff, Erwin, Bancroft, Frederic W.,** and **Stanley-Brown, Margaret.** Studies on the chemistry of blood coagulation. I. The measurement of the inhibition of blood clotting. Methods and units, 149

—, —, and —. II. On the inhibition of blood clotting by substances of high molecular weight, 155

**Collier, Vines, Jr.** Determination of chlorides in biological materials, 239

**Conner, R. T.,** and **Sherman, H. C.** Some aspects of protein intake in relation to growth and rate of calcification, 695

**Cori, Carl F.** See FISHER, RUSSELL, and CORI, 627

**Craig, Lyman C.** See JACOBS and CRAIG, 227

**Crowe, M. O'L.** The ultraviolet absorption spectrum curve of phthiocol, a pigment of the human tubercle bacillus, 479

D

**Dakin, H. D., Ungley, C. C.,** and **West, Randolph.** Further observations on the chemical nature of a hematopoietic substance occurring in liver, 771

**Daniels, Farrington.** See HOFFMAN and DANIELS, 119

**Diller, Isaac M.** Photoelectric colorimeter, 315

**Doisy, Edward A.** See MACCORQUODALE, THAYER, and DOISY, 435

**Drekter, I. J., Sobel, Albert E.,** and **Natelson, Samuel.** Fractionation of cholesterol in blood by precipitation as pyridine cholesteryl sulfate and cholesterol digitonide, 391

—. See SOBEL, DREKTER, and NATELSON, 381

**Duff, Virginia B.** See BODANSKY, 641

**Dyer, Helen M.,** and **du Vigneaud, Vincent.** The utilization of glutathione in connection with a cystine-deficient diet, 543

E

**Ehrenfest, Ellen.** See RONZONI and EHRENFEST, 749

**Elderfield, Robert C.** On thevetin, 247

**Elvehjem, C. A., Koehn, C. J., Jr.,** and **Oleson, J. J.** A new essential dietary factor, 707

—. See SCHULTZE, ELVEHJEM, and HART, 453

**Evans, E. A., Jr.** Further evidence for the absence of allocholesterol from the organism, 449

— and **Schoenheimer, Rudolf.** β-Cholesterol, 17

**Evans, Margaret.** See LANGLEY and EVANS, 333

**Evelyn, Kenneth A.** A stabilized photoelectric colorimeter with light filters, 63

F

**Fisher, Robert E., Russell, Jane A.,** and **Cori, Carl F.** Glycogen disappearance and carbohydrate oxidation in hypophysectomized rats, 627

**Flock, Eunice.** Effect of autolysis on the phosphate compounds in the liver of the dog, 207

—, **Bollman, Jesse L.,** and **Mann, Frank C.** Effect of certain substances on the phosphate compounds in the liver of the dog, 201

—, —, and —. Effect of diet on phosphate compounds in the liver of the dog, 179

**Foster, G. L., Palmer, Walter W.,** and **Leland, Jessica P.** A comparison of the calorigenic potencies of *l*-thyroxine, *dl*-thyroxine, and thyroid gland. With a note on the thyroxine content of the acid-soluble fraction of the peptic digest of thyroid protein, 467

**Friedemann, Theodore E.,** and **Klaas, Rosalind.** The determination of ethyl alcohol, 47

**Fruton, Joseph S.** See BERGMANN, ZERVAS, and FRUTON, 593

G

**Glick, David,** and **Biskind, Gerson R.** Studies in histochemistry. IX. The quantitative distribution of vitamin C in the adrenal gland at various stages of development, 551

**Goebel, Walther F.** See HOTCHKISS and GOEBEL, 285

**Goudsmit, Arnoldus, Jr.** On the origin of urinary creatinine, 613

**Greenberg, David M.,** and **Larson, Clarence E.** Remarks on the paper by Tendeloo on a new and easy method for the potentiometric determination of calcium concentrations in solutions, 769

**Guerrant, Ralph E.** See HOGAN, GUERRANT, and RITCHIE, 659

H

**Halenz, H. F.** See WAKEHAM and HALENZ, 429

**Hall, F. G.** The effect of altitude on the affinity of hemoglobin for oxygen, 485

**Hart, E. B.** See SCHULTZE, ELVEHJEM, and HART, 453

**Hawley, Estelle E.** See STEPHENS and HAWLEY, 653

**Heidt, Lawrence J.** The ultraviolet absorption spectra of thyroxine, thyronine, tyrosine, diiodotyrosine, and thyroglobulin, 223

**Herrmann, Cornelius L.** See BODANSKY, 641

**Hoffman, Robert M.**, and **Daniels, Farrington.** The formation of vitamin D by cathode rays, 119

**Hogan, Albert G., Guerrant, Ralph E.**, and **Ritchie, Walter S.** Additional observations on the anemia caused by deaminized casein, 659

**Hotchkiss, Rollin D.**, and **Goebel, Walther F.** Derivatives of glucuronic acid. VII. The synthesis of aldobionic acids, 285

**Howell, Stacey F.** See SUMNER and HOWELL, 583

**Hunt, Madison.** See DU VIGNEAUD and HUNT, 93

J

**Jacobs, Walter A.**, and **Craig, Lyman C.** The ergot alkaloids. XI. Isomeric dihydrolysergic acids and the structure of lysergic acid, 227

**Jones, James H.** The relation of serum phosphates to parathyroid tetany, 371

**Jukes, Thomas H.** See LEPKOVSKY, JUKES, and KRAUSE, 557

K

**Klaas, Rosalind.** See FRIEDEMANN and KLAAS, 47

**Koehn, C. J., Jr.** See ELVEHJEM, KOEHN, and OLESON, 707

**Krause, Myrtise E.** See LEPKOVSKY, JUKES, and KRAUSE, 557

**Kuna, Martin.** See LEVENE, 275

**Kuna, Martin.** See LEVENE and MARKER, 267

—. See LEVENE and ROTHEN, 415

—. See LEVENE, ROTHEN, and MARKER, 253

—. See LEVENE, ROTHEN, and MEYER, 401

L

**Langley, Wilson D.**, and **Evans, Margaret.** The determination of creatinine with sodium 3,5-dinitrobenzoate, 333

**Larson, Clarence E.** See GREENBERG and LARSON, 769

**Larson, P. S.**, and **Brewer, George.** The relation of the adrenal medulla to the effect of insulin on purine metabolism, 279

**Lee, Milton.** See AYRES and LEE, 139

**Leland, Jessica P.** See FOSTER, PALMER, and LELAND, 467

**Lepkovsky, Samuel, Jukes, Thomas H.**, and **Krause, Myrtise E.** The multiple nature of the third factor of the vitamin B complex, 557

**Levene, P. A.** Note on the hydrogenation of phenylated carbinols, 275

— and **Marker, R. E.** Optical rotations in homologous series of aliphatic amines, 267

— and **Rothen, Alexandre.** Optical rotations of configurationally related azides, 415

—, —, and **Marker, R. E.** Optical rotations and rotatory dispersions in homologous series of aliphatic nitriles, 253

**Levene, P. A., Rothen, Alexandre,** and **Meyer, G. M.** Configurational relationship of members of disubstituted acetic and propionic acids containing an ethyl group, 401

— and **Tipson, R. Stuart.** An improved method for the preparation of xylulose and ribulose, 731

**Lew, W.** See ADDIS, POO, and LEW, 111, 117

**Luck, James Murray.** Liver proteins. I. The question of protein storage, 491

**Ludewig, Stephan,** and **Chanutin, Alfred.** The lipoid phosphorus content of hypertrophied hearts and kidneys in the rat, 327

—. See CHANUTIN and LUDEWIG, 1

M

**MacCorquodale, D. W., Thayer, Sidney A.,** and **Doisy, Edward A.** The isolation of the principal estrogenic substance of liquor folliculi, 435

**Malisoff, William Marias,** and **Stenbuck, Frederick A.** Effect of short electric waves on sterol colloids, 87

**Mann, Frank C.** See FLOCK, BOLLMAN, and MANN, 179, 201

**Marker, R. E.** See LEVENE and MARKER, 267

—. See LEVENE, ROTHEN, and MARKER, 253

**Marks, Graham W.** The effect of glutathione and other substances on the inactivation of catalases, 299

**Meyer, Curtis E.,** and **Rose, William C.** The spatial configuration of $\alpha$-amino-$\beta$-hydroxy-*n*-butyric acid, 721

**Meyer, G. M.** See LEVENE, ROTHEN, and MEYER, 401

**Mezincescu, M. D.,** and **Szabo, F.** Method for the determination of the non-protein nitrogen of tissue, 131

**Michaelis, Leonor,** and **Schubert, Maxwell P.** Dimethylglycine buffer, 221

N

**Natelson, Samuel.** See DREKTER, SOBEL, and NATELSON, 391

—. See SOBEL, DREKTER, and NATELSON, 381

**Nelson, J. M.** See WAGREICH and NELSON, 459

**Neurath, Hans,** and **Bull, Henry B.** The denaturation and hydration of proteins. I, 519

**Niemann, Carl.** See BERGMANN and NIEMANN, 77

O

**Oleson, J. J.** See ELVEHJEM, KOEHN, and OLESON, 707

P

**Palmer, Walter W.** See FOSTER, PALMER, and LELAND, 467

**Pearson, Olof H.** The reaction of cyanide with the hemocyanin of *Limulus polyphemus*, 171

**Poo, L. J.** See ADDIS, POO, and LEW, 111, 117

R

**Ravin, A.** Colorimetric determination of acetone by the salicylaldehyde method, 511

**Rheinberger, Margaret B.** The nitrogen partition in the urine of various primates, 343

**Ritchie, Walter S.** See HOGAN, GUERRANT, and RITCHIE, 659

**Rittenberg, D.** See SCHOENHEIMER, RITTENBERG, BERG, and ROUSSELOT, 635

**Ronzoni, Ethel,** and **Ehrenfest, Ellen.** The effect of dinitrophenol on the metabolism of frog muscle, 749

**Rose, William C.** See MEYER and ROSE, 721

**Rothen, Alexandre.** See LEVENE and ROTHEN, 415

—. See LEVENE, ROTHEN, and MARKER, 253

—. See LEVENE, ROTHEN, and MEYER, 401

**Rousselot, Louis.** See SCHOENHEIMER, RITTENBERG, BERG, and ROUSSELOT, 635

**Russell, Jane A.** See FISHER, RUSSELL, and CORI, 627

S

**Schoenheimer, Rudolf,** and **Berliner, Frieda.** The preparation of lithocholic acid from cholesterol, 19

—, **Rittenberg, D., Berg, Benjamin N.,** and **Rousselot, Louis.** Deuterium as an indicator in the study of intermediary metabolism. VII. Studies in bile acid formation, 635

—. See EVANS and SCHOENHEIMER, 17

**Schubert, Maxwell P.** See MICHAELIS and SCHUBERT, 221

**Schultze, M. O., Elvehjem, C. A.,** and **Hart, E. B.** Further studies on the availability of copper from various sources as a supplement to iron in hemoglobin formation, 453

**Scott, Aleita Hopping,** and **Berg, Benjamin N.** Blood lactic acid following the administration of insulin in cats without the adrenal medulla, 163

**Sendroy, Julius, Jr., Shedlovsky, Theodore,** and **Belcher, Donald.** The validity of determinations of the pH of whole blood at thirty-eight degrees with the glass electrode, 529

**Shedlovsky, Theodore.** See SENDROY, SHEDLOVSKY, and BELCHER, 529

**Sherman, H. C.** See CONNER and SHERMAN, 695

—. See TOEPFER and SHERMAN, 685

—. See WHITCHER, BOOHER, and SHERMAN, 679

**Sherman, Jane M.** See TALBOTT and SHERMAN, 361

**Sinclair, Robert Gordon.** Blood phospholipid as a transport mechanism, 211

**Sobel, Albert E., Drekter, I. J.,** and **Natelson, Samuel.** Estimation of small amounts of cholesterol as the pyridine cholesteryl sulfate, 381

—. See DREKTER, SOBEL, and NATELSON, 391

**Stanley, W. M.** Chemical studies on the virus of tobacco mosaic. VII. An improved

method for the preparation of crystalline tobacco mosaic virus protein, 673

**Stanley-Brown, Margaret.** See CHARGAFF, BANCROFT, and STANLEY-BROWN, 149, 155

**Stearns, Genevieve.** See WARWEG and STEARNS, 567

**Stenbuck, Frederick A.** See MALISOFF and STENBUCK, 87

**Stephens, D. J., and Hawley, Estelle E.** The partition of reduced ascorbic acid in blood, 653

**Stoughton, Roger W.** A method for the quantitative determination of phenols, 293

**Sumner, James B., and Howell, Stacey F.** The rôle of divalent metals in the reversible inactivation of jack bean hemagglutinin, 583

**Szabo, F.** See MEZINCESCU and SZABO, 131

T

**Talbott, John H., and Sherman, Jane M.** Urate distribution in blood, 361

**Thayer, Sidney A.** See MACCORQUODALE, THAYER, and DOISY, 435

**Tipson, R. Stuart.** See LEVENE and TIPSON, 731

**Toepfer, E. W., and Sherman, H. C.** The effect of liberal intakes of calcium or calcium and phosphorus on growth and body calcium, 685

U

**Ungley, C. C.** See DAKIN, UNGLEY, and WEST, 771

V

**du Vigneaud, Vincent, and Hunt, Madison.** The synthesis of *d*-carnosine, the enantiomorph of the naturally occurring form, and a study of its depressor effect on the blood pressure, 93

—. See DYER and DU VIGNEAUD, 543

W

**Wagreich, Harry, and Nelson, J. M.** On the oxidation product of catechol when oxidized by means of tyrosinase, 459

**Wakeham, Glen, and Halenz, H. F.** The distribution of iron in certain tissues of normal and anemic albino rats, 429

**Warweg, Edna, and Stearns, Genevieve.** Studies of phosphorus of blood. V. A comparative study of acid and enzymatic hydrolysis of the acid-soluble organic phosphorus, with particular reference to the phosphoglycerate fraction, 567

**West, Randolph.** See DAKIN, UNGLEY, and WEST, 771

**Whitcher, L. B., Booher, Lela E., and Sherman, H. C.** Further studies on the calcium content of the body in relation to the calcium and phosphorus content of the food, 679

Z

**Zervas, Leonidas.** See BERGMANN, ZERVAS, and FRUTON, 593

## INDEX TO SUBJECTS

A

**Acetic acid(s):** Disubstituted, with ethyl group, configurational relationship (LEVENE, ROTHEN, and MEYER) 401
Guanido-, creatine precursor (BODANSKY) 641
**Acetone:** Determination, colorimetric, salicylaldehyde method (RAVIN) 511
**Adrenal(s):** Medulla, purine metabolism, insulin and, relation (LARSON and BREWER) 279
— removal, blood lactic acid, insulin and, effect (SCOTT and BERG) 163
Vitamin C distribution, development relation (GLICK and BISKIND) 551
**Alcohol:** Ethyl. *See* Ethyl alcohol
**Aldobionic acids:** Synthesis (HOTCHKISS and GOEBEL) 285
**Alkaloids:** Ergot (JACOBS and CRAIG) 227
**Allocholesterol:** Body, absence (EVANS) 449
**Altitude:** Hemoglobin oxygen affinity, effect (HALL) 485
**Amines:** Aliphatic, homologous series, optical rotations (LEVENE and MARKER) 267
**Amino acids:** α-, kidney and intestinal phosphatases, effect (BODANSKY) 101
**Amino-β-hydroxy-n-butyric acid:** α-, configuration, spatial (MEYER and ROSE) 721
**Anemia:** Casein, deaminized, production (HOGAN, GUERRANT, and RITCHIE) 659
Tissue iron distribution (WAKEHAM and HALENZ) 429
**Apparatus:** Colorimeter, photoelectric (DILLER) 315
—, —, stabilized (EVELYN) 63
**Ascorbic acid:** Blood, reduced, partition (STEPHENS and HAWLEY) 653
**Azides:** Configurationally related, optical rotations (LEVENE and ROTHEN) 415

B

**Bacillus:** Tubercle. *See* Tubercle bacillus
**Bean:** Jack, hemagglutinin, inactivation, reversible, divalent metals, relation (SUMNER and HOWELL) 583
**Bile acid:** Formation, deuterium as indicator (SCHOENHEIMER, RITTENBERG, BERG, and ROUSSELOT) 635

**Bile duct:** Ligation, blood plasma cholesterol and phospholipid phosphorus, effect (CHANUTIN and LUDEWIG) 1
**Blood:** Coagulation, inhibition, substances affecting (CHARGAFF, BANCROFT, and STANLEY-BROWN) 155
—, —, technique for measuring (CHARGAFF, BANCROFT, and STANLEY-BROWN) 149
Phospholipid, as transport mechanism (SINCLAIR) 211
**Blood cell:** Red, lipids, extraction (BOYD) 37
**Blood pressure:** *d*-Carnosine effect (DU VIGNEAUD and HUNT) 93
**Buffer:** Dimethylglycine (MICHAELIS and SCHUBERT) 221
**Butyric acid:** *n*-, $\alpha$-amino-$\beta$-hydroxy-, configuration, spatial (MEYER and ROSE) 721

C

**Calcification:** Protein intake, relation (CONNER and SHERMAN) 695
**Calcium:** Body, calcium and phosphorus intake levels, effect (TOEPFER and SHERMAN) 685
—, food calcium and phosphorus, relation (WHITCHER, BOOHER, and SHERMAN) 679
Determination, potentiometric (GREENBERG and LARSON) 769
Electrodes, crystals as (ANDERSON) 323
**Calcium**—*continued:*
Food, body calcium, relation (WHITCHER, BOOHER, and SHERMAN) 679
Intake levels, body calcium and growth, effect (TOEPFER and SHERMAN) 685
Phosphorus and, intake levels, body calcium and growth, effect (TOEPFER and SHERMAN) 685
**Carbinols:** Phenylated, hydrogenation (LEVENE) 275
**Carbohydrate:** Hypophysectomy effect (FISHER, RUSSELL, and CORI) 627
**Carnosine:** *d*-, synthesis and blood pressure effect (DU VIGNEAUD and HUNT) 93
**Casein:** Deaminized, anemia production (HOGAN, GUERRANT, and RITCHIE) 659
**Catalases:** Inactivation, glutathione effect (MARKS) 299
**Catechol:** Oxidation product, tyrosinase relation (WAGREICH and NELSON) 459
**Cathode ray:** Vitamin D formation, effect (HOFFMAN and DANIELS) 119
**Chlorides:** Biological materials, determination (COLLIER) 239
**Cholesterol:** Allo-, body, absence (EVANS) 449
$\beta$- (EVANS and SCHOENHEIMER) 17
Blood, fractionation (DREKTER, SOBEL, and NATELSON) 391
— plasma, hepatectomy, partial, and bile duct ligation, effect (CHANUTIN and LUDEWIG) 1

**Cholesterol**—*continued:*
Lithocholic acid preparation from (SCHOENHEIMER and BERLINER) 19
Microdetermination (SOBEL, DREKTER, and NATELSON) 381
**Cholic acid:** Litho-, preparation from cholesterol (SCHOENHEIMER and BERLINER) 19
**Clotting:** Blood, inhibition, substances affecting (CHARGAFF, BANCROFT, and STANLEY-BROWN) 155
—, —, technique for measuring (CHARGAFF, BANCROFT, and STANLEY-BROWN) 149
**Colloids:** Sterol, short electric waves, effect (MALISOFF and STENBUCK) 87
**Colorimeter:** Photoelectric (DILLER) 315
—, stabilized (EVELYN) 63
**Copper:** Hemoglobin formation, iron supplement (SCHULTZE, ELVEHJEM, and HART) 453
**Creatine:** Glycine and guanidoacetic acid as precursors (BODANSKY) 641
**Creatinine:** Determination, sodium 3,5-dinitrobenzoate use (LANGLEY and EVANS) 333
Urine, origin (GOUDSMIT) 613
**Cyanide:** *Limulus polyphemus* hemocyanin, reaction (PEARSON) 171
**Cystine:** -Deficient diet, glutathione utilization (DYER and DU VIGNEAUD) 543
Proteins, determination (BAERNSTEIN) 33

D

**Depressor:** Activity, *d*-carnosine (DU VIGNEAUD and HUNT) 93
**Deuterium:** Bile acid formation indicator (SCHOENHEIMER, RITTENBERG, BERG, and ROUSSELOT) 635
**Diet:** Factor, essential, new (ELVEHJEM, KOEHN, and OLESON) 707
Liver phosphate compounds, effect (FLOCK, BOLLMAN, and MANN) 179
*See also* Food
**Dihydrolysergic acid:** Isomer (JACOBS and CRAIG) 227
**Diiodotyrosine:** Absorption spectrum, ultraviolet (HEIDT) 223
**Dimethylglycine:** Buffer (MICHAELIS and SCHUBERT) 221
**Dinitrophenol:** Muscle, frog, metabolism effect (RONZONI and EHRENFEST) 749

E

**Electric waves:** Short, sterol colloids, effect (MALISOFF and STENBUCK) 87
**Electrode:** Calcium, crystals as (ANDERSON) 323
**Enzymes:** Proteolytic (BERGMANN, ZERVAS, and FRUTON) 593
*See also* Catalase, Papain, Pepsin, Peptidase, Phosphatase, Tyrosinase
**Ergot:** Alkaloids (JACOBS and CRAIG) 227

**Estrogenic substance:** Liquor folliculi, isolation (MacCorquodale, Thayer, and Doisy) 435
**Ethyl alcohol:** Determination (Friedemann and Klaas) 47

F

**Fasting:** Liver protein, effect (Addis, Poo, and Lew) 117
Organ and tissue proteins, effect (Addis, Poo, and Lew) 111
**Fibrin:** Blood (Bergmann and Niemann) 77
**Food:** Calcium, body calcium, relation (Whitcher, Booher, and Sherman) 679
Phosphorus, body calcium, relation (Whitcher, Booher, and Sherman) 679
*See also* Diet

G

**Glucuronic acid:** Derivatives (Hotchkiss and Goebel) 285
**Glutathione:** Catalase inactivation, effect (Marks) 299
Cystine-deficient diet, utilization (Dyer and du Vigneaud) 543
**Glycine:** Creatine precursor (Bodansky) 641
Dimethyl-, buffer (Michaelis and Schubert) 221
**Glycogen:** Hypophysectomy effect (Fisher, Russell, and Cori) 627
**Growth:** Calcium and phosphorus intake levels, effect (Toepfer and Sherman) 685
**Growth**—*continued:*
Protein intake, relation (Conner and Sherman) 695
**Guanidoacetic acid:** Creatine precursor (Bodansky) 641

H

**Heart:** Hypertrophy, lipoid phosphorus (Ludewig and Chanutin) 327
**Hemagglutinin:** Jack bean, inactivation, reversible, divalent metals, relation (Sumner and Howell) 583
**Hematopoietic substance:** Liver, chemistry (Dakin, Ungley, and West) 771
**Hemocyanin:** *Limulus polyphemus*, cyanide reaction (Pearson) 171
**Hemoglobin:** Formation, copper supplement to iron (Schultze, Elvehjem, and Hart) 453
Oxygen affinity, altitude effect (Hall) 485
**Hemorrhage:** Anti-, vitamin, purification (Almquist) 589
**Hydrogen ion concentration:** Blood, determination, glass electrode (Sendroy, Shedlovsky, and Belcher) 529
**Hypophysis:** *See* Pituitary

I

**Insulin:** Blood lactic acid, adrenal medulla removal and, effect (Scott and Berg) 163
Purine metabolism, adrenal medulla and, relation (Larson and Brewer) 279

**Intestine:** Phosphatase, α-amino acids and magnesium, effect (BODANSKY) 101

**Iron:** Hemoglobin formation, copper supplement (SCHULTZE, ELVEHJEM, and HART) 453

Tissues, distribution, normal and anemic rats (WAKEHAM and HALENZ) 429

J

**Jack bean:** *See* Bean

K

**Kidney:** Hypertrophy, lipoid phosphorus (LUDEWIG and CHANUTIN) 327

Phosphatase, α-amino acids and magnesium, effect (BODANSKY) 101

L

**Lactic acid:** Blood, insulin and adrenal medulla removal, effect (SCOTT and BERG) 163

**Limulus polyphemus:** Hemocyanin, cyanide reaction (PEARSON) 171

**Lipids:** Blood cell, red, extraction (BOYD) 37

**Lipoid phosphorus:** Hearts and kidneys, hypertrophied (LUDEWIG and CHANUTIN) 327

**Liquor folliculi:** Estrogenic substance isolation (MACCORQUODALE, THAYER, and DOISY) 435

**Lithocholic acid:** Preparation from cholesterol (SCHOENHEIMER and BERLINER) 19

**Liver:** Hematopoietic substance, chemistry (DAKIN, UNGLEY, and WEST) 771

Hepatectomy, partial, blood plasma cholesterol and phospholipid phosphorus, effect (CHANUTIN and LUDEWIG) 1

Phosphate compounds, autolysis effect (FLOCK) 207

— —, diet effect (FLOCK, BOLLMAN, and MANN) 179

— —, substances affecting (FLOCK, BOLLMAN, and MANN) 201

Protein, fasting effect (ADDIS, POO, and LEW) 117

Proteins, storage (LUCK) 491

**Lysergic acid:** Dihydro-, isomer (JACOBS and CRAIG) 227

Structure (JACOBS and CRAIG) 227

**Lysine:** *dl*-, resolution (BERG) 9

M

**Magnesium:** Kidney and intestinal phosphatases, effect (BODANSKY) 101

**Metabolism:** Intermediary, deuterium as indicator (SCHOENHEIMER, RITTENBERG, BERG, and ROUSSELOT) 635

Purine, insulin and adrenal medulla, relation (LARSON and BREWER) 279

**Metals:** Divalent, jack bean hemagglutinin inactivation, reversible, relation (SUMNER and HOWELL) 583

**Methionine:** Proteins, determination (BAERNSTEIN) 25, 33

**Muscle**: Frog, metabolism, dinitrophenol effect (RONZONI and EHRENFEST) 749

N

**Nitriles**: Aliphatic, homologous series, optical rotations and rotatory dispersions (LEVENE, ROTHEN, and MARKER) 253

**Nitrogen**: Non-protein, tissue, determination (MEZINCESCU and SZABO) 131

Partition, tissues (AYRES and LEE) 139

—, urine, Primates (RHEINBERGER) 343

O

**Organs**: Protein, fasting effect (ADDIS, POO, and LEW) 111

**Oxygen**: Hemoglobin affinity, altitude effect (HALL) 485

P

**Papain**: Peptidase I, specificity (BERGMANN, ZERVAS, and FRUTON) 593

**Parathyroid**: Tetany, blood serum phosphates, relation (JONES) 371

**Pepsin**: Thyroid protein digest, thyroxine (FOSTER, PALMER, and LELAND) 467

**Peptidase**: I, papain specificity (BERGMANN, ZERVAS, and FRUTON) 593

**Phenol(s)**: Determination (STOUGHTON) 293

Dinitro-, muscle, frog, metabolism effect (RONZONI and EHRENFEST) 749

**Phosphatases**: Intestine, α-amino acids and magnesium, effect (BODANSKY) 101

Kidney, α-amino acids and magnesium, effect (BODANSKY) 101

**Phosphate(s)**: Blood serum, parathyroid tetany, relation (JONES) 371

Compounds, liver, autolysis effect (FLOCK) 207

—, —, diet effect (FLOCK, BOLLMAN, and MANN) 179

—, —, substances affecting (FLOCK, BOLLMAN, and MANN) 201

**Phosphoglycerate**: Blood (WARWEG and STEARNS) 567

**Phospholipid**: Blood, as transport mechanism (SINCLAIR) 211

Phosphorus, blood plasma, hepatectomy, partial, and bile duct ligation, effect (CHANUTIN and LUDEWIG) 1

**Phosphorus**: Acid-soluble organic, blood, hydrolysis, acid and enzyme (WARWEG and STEARNS) 567

Calcium and, intake levels, body calcium and growth, effect (TOEPFER and SHERMAN) 685

Food, body calcium, relation (WHITCHER, BOOHER, and SHERMAN) 679

Lipoid. *See* Lipoid phosphorus

Phospholipid, blood plasma, hepatectomy, partial, and bile duct ligation, effect (CHANUTIN and LUDEWIG) 1

**Phthiocol:** Tubercle bacillus, human, absorption spectrum curve, ultraviolet (CROWE) 479

**Pigment:** Tubercle bacillus, human, absorption spectrum curve, ultraviolet (CROWE) 479

**Pituitary:** Hypophysectomy, glycogen disappearance and carbohydrate oxidation (FISHER, RUSSELL, and CORI) 627

**Primates:** Urine nitrogen partition (RHEINBERGER) 343

**Propionic acids:** Disubstituted, with ethyl group, configurational relationship (LEVENE, ROTHEN, and MEYER) 401

**Protein(s):** Cystine determination (BAERNSTEIN) 33

Denaturation and hydration (NEURATH and BULL) 519

Intake, growth and calcification, effect (CONNER and SHERMAN) 695

Liver, fasting effect (ADDIS, POO, and LEW) 117

—, storage (LUCK) 491

Methionine determination (BAERNSTEIN) 25, 33

Organs, fasting effect (ADDIS, POO, and LEW) 111

Structure (BERGMANN and NIEMANN) 77

Sulfur, determination (BAERNSTEIN) 33

Thyroid, peptic digest, thyroxine (FOSTER, PALMER, and LELAND) 467

Tissues, fasting effect (ADDIS, POO, and LEW) 111

**Protein(s)**—*continued:*

Tobacco mosaic virus, crystalline, preparation (STANLEY) 673

**Proteolysis:** Enzymes (BERGMANN, ZERVAS, and FRUTON) 593

**Purine:** Metabolism, insulin and adrenal medulla, relation (LARSON and BREWER) 279

R

**Ray:** Cathode. *See* Cathode ray

**Ribulose:** Preparation (LEVENE and TIPSON) 731

S

**Sodium 3,5-dinitrobenzoate:** Creatinine determination, use (LANGLEY and EVANS) 333

**Sterol:** Colloids, short electric waves, effect (MALISOFF and STENBUCK) 87

**Sulfur:** Proteins, determination (BAERNSTEIN) 33

T

**Tetany:** Parathyroid, blood serum phosphates, relation (JONES) 371

**Thevetin:** (ELDERFIELD) 247

**Thyroglobulin:** Absorption spectrum, ultraviolet (HEIDT) 223

**Thyroid:** Calorigenic potency (FOSTER, PALMER, and LELAND) 467

Protein, peptic digest, thyroxine (FOSTER, PALMER, and LELAND) 467

**Thyronine:** Absorption spectrum, ultraviolet (HEIDT) 223
**Thyroxine:** Absorption spectrum, ultraviolet (HEIDT) 223
*l-*, and *dl-*, calorigenic potencies, comparison (FOSTER, PALMER, and LELAND) 467
Thyroid protein peptic digest (FOSTER, PALMER, and LELAND) 467
**Tissues:** Nitrogen partition (AYRES and LEE) 139
Protein, fasting effect (ADDIS, POO, and LEW) 111
**Tobacco:** Mosaic virus protein, crystalline, preparation (STANLEY) 673
**Tubercle bacillus:** Human, phthiocol, absorption spectrum curve, ultraviolet (CROWE) 479
**Tyrosinase:** Catechol oxidation product, relation (WAGREICH and NELSON) 459
**Tyrosine:** Absorption spectrum, ultraviolet (HEIDT) 223
**Tyrosine**—*continued:*
Diiodo-, absorption spectrum, ultraviolet (HEIDT) 223

U

**Urates:** Blood, distribution (TALBOTT and SHERMAN) 361
**Urine:** Primates, nitrogen partition (RHEINBERGER) 343

V

**Vitamin(s):** Antihemorrhagic, purification (ALMQUIST) 589
B complex, third factor, multiple nature (LEPKOVSKY, JUKES, and KRAUSE) 557
C, adrenals, distribution, development relation (GLICK and BISKIND) 551
D formation, cathode rays, effect (HOFFMAN and DANIELS) 119

X

**Xylulose:** Preparation (LEVENE and TIPSON) 731
